

9 String Theory Tech Rider and Stage Plot

Performance Space: Clean stage or performance area, 8' x 6' minimum.

Set-up Time: 3 mins (if sound-check and set-up handled prior.)

Program Length: 15-20 mins showcase

Sound: 9 String Theory uses two AT 4041 instrument mics that we provide, with our own mic stands. When a mixer and PA system are not available, we run mics to a phantom powered Bose mixer and L1 tower amplifier. When a larger PA is provided, mics can be used (with phantom power required) to any PA system. Auxiliary output from Bose system can be used to carry the instrument sound to another mixer or amplifier when necessary. In case of a large room, we require one vocal mic and stand.

Set: Both members of 9 String Theory perform seated, requiring chairs with no armrests to facilitate performance. Chairs are placed side-by-side at a 3' distance, in front of the Bose amplifier. Lighting must be good general lighting at a minimum. Electricity must be provided, and within 25' of stage equipment.
